Page 2

#### **DETAILED ACTION**

#### Election/Restrictions

- 1. Restriction to one of the following Inventions is required under 35 U.S.C. 121:
  - Claims 1-14, drawn to a method of treating gastritis and peptic ulcer diseases comprising administration of an oral liquid dosage form containing bile acid, starch or non-starch polysaccharide and water
  - II. Claims 15- 22, drawn to a method for treating a liver diseases comprising administration of an oral liquid dosage form containing bile acid, starch or non-starch polysaccharide and water.
  - III. Claims 23-27, drawn to a method for treating gall stones comprising administration of an oral liquid dosage form containing bile acid, starch or non-starch polysaccharide and water
  - IV. Claims 28-36, drawn to a method for treating or preventing colorectal adenoma comprising administration of an oral liquid dosage form containing bile acid, starch or non-starch polysaccharide and water
  - V. Claims 37-47, drawn to a method for treating hyperlipidemia comprising administration of an oral liquid dosage form containing bile acid, starch or non-starch polysaccharide and water.
  - VI. Claims 48-77, 81 and 138-147, drawn to a clear aqueous composition comprising a bile acid or its analogs, an aqueous soluble non-starch polysaccharide and water.

Application/Control Numb r: 09/778,154

Art Unit: 1614

Page 3

- VII. Claims 78-80, drawn to a method of preparing an aqueous solution of group VI.
- VIII. Claims 82-87, drawn to a clear aqueous solution comprising a bile acid containing first material, a second material containing an aqueous soluble starch or non-starch polysaccharide, a third material comprising an aqueous soluble bismuth compound and water.
- VIII. Claims 97-128, drawn to a method of increasing or decreasing the enterohepatic bile acid; increasing the blood concentration of intact bile acid; or increasing or decreasing absorption and elimination of intact bile acid comprising administration of an oral liquid dosage form containing bile acid, starch or non-starch polysaccharide and water.
- 2. Inventions (VI or VIII) and (I-V, VIIII) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)).
- 3. Inventions (VI or VIII) and VII are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)).

Application/Control Number: 09/778,154

Art Unit: 1614

Page 4

- 4. Inventions I, II, IV, V and VIIII are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01).
- 5. Inventions V and VIII are independent and distinct, each from the other, as they have acquired a separate status in the art and/or require independent searches. It is noted that a reference to one combination of drugs would not be a reference to another combination of drugs under U.S. C. 103. Further, the claims read on a multitue of combinations of drugs which would require many field of searches that would be an undue burden on the examiner. Therefore, restriction for examination purposes is proper.
- 6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the search required for each group is not same, wherein a reference which anticipates the invention of Group I would not render the invention of Group II or III obvious, absent ancillary art, restriction for examination purposes as indicated is proper. Even if there were unity of classification, the search of entire groups and/or genus in the non-patent literature(especially, non-patent literature) and database search (a significant part of a thorough examination) would be burdensome, it is undue burden for examiner for the accurate and proper examination, restriction for examination purposes as indicated is proper.

Application/Control Number: 09/778,154

Art Unit: 1614

Page 5

Election of speice

7. Upon the election of the group that contains patentably distinct invention, applicant is further required to elect the species of the each component. This application contains claims directed to the following patentably distinct species of the claimed invention: Firstly, the claims include various bile acid analogs including bile acid, its salts, its derivatives and a bile acid conjugated with an amine. For instance, Claim 61 is listing various patentably distinct species of bile acid. Secondly the claims include patentably distinct species found in second material(e.g. starch conversion product or non-starch polysaccharide). In the case of that group VIIII is elected, applicant is required to elect the species mentioned immediately above (i.e. first and second material) and found in specific utility (i.e. claim 97, 104, 111, 120 or 129).

The various sets of combinations comprising different first material and second material are independent and distinct, each from the other, as they have acquired a separate status in the art and/or require independent searches.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

Page 6

Application/Control Number: 09/778,164

154

**Art Unit: 1614** 

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

#### Conclusion

All the pending claims are subject to restriction/election requirement.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vickie Kim whose telephone number is (703) 305-1675 (Tuesday-Friday: 8AM-6:30PM).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1235.

Vickle Kim,

Patent examiner
